Health care avoidance slowed

cost growth in large employer health plans in 2020 Plan members stayed away from health care facilities for much of 2020, slowing health benefit cost growth to the lowest level in more than two decades for employers with 500 or more employees. These large employers typically self-fund their plans, which means they may see costs fall as utilization falls, unlike fully insured employers that pay

a fixed premium. Average total health benefit cost per employee 2019 2020

Telemedicine utilization rates are climbing, and employers are generally pleased with how their programs are performing. Many have waived copayments to encourage use, and most foresee a larger role for all forms of virtual care going forward. Average percentage of eligible members (including family members) using the service at least once during the plan year.
